Kian Mwiberi

Full-Stack Developer · IT Systems & Support

Nairobi, Kenya · +254 748 111 373 · muchemikian@gmail.com · linkedin.com/in/kian-muchemi-03820b382 · github.com/Mwiberikian

PROFILE

Final-year Informatics and Computer Science student at Strathmore University who builds web applications end to end with React, Node.js, PostgreSQL and MySQL. Currently building an airline shift handover platform as my capstone, backed by hands-on IT experience in networks, domain administration and hardware support from an attachment at Kenyatta National Hospital. Seeking graduate roles in software development or IT systems.

EXPERIENCE

IT Assistant (Industrial Attachment) — Kenyatta National Hospital, Nairobi — Jan – Mar 2026

- Contributed to system design and architecture work on the hospital's internal systems alongside the ICT team.
- Diagnosed and resolved hardware faults on staff computers and devices.
- Handled network and domain administration tasks, including connectivity troubleshooting and domain account management.

PROJECTS

Shift Handover Management System — Final-year project, designed for Kenya Airways — 2026 – present

React · Node.js / Express · PostgreSQL · Tailwind CSS · Docker

- Building a web platform that replaces informal shift handovers with structured, auditable digital records across four departments: ground operations, maintenance, customer service and flight operations.
- Designed role-based workflows for four roles: outgoing staff log tasks and incidents, incoming staff acknowledge or raise queries, supervisors review and track handovers, and admins manage the system.
- Implemented authentication, the full handover lifecycle, admin tools and role dashboards with an automated test suite, delivered over four Agile Scrum sprints using object-oriented analysis and design.

PageVault — Digital library platform (personal project) — 2026

PHP · MySQL · JavaScript · HTML / CSS | github.com/Mwiberikian/library

- Built a digital library with title/author search, genre filtering, book detail pages, an in-browser reader and a personal reading history.
- Secured accounts with hashed passwords, session-based authentication, PDO prepared statements, CSRF tokens and hashed, time-limited password-reset tokens.
- Added an admin dashboard with role-based access control for managing the book catalogue and user accounts.

Earlier projects

- **School Clubs Management System** (PHP, MySQL, JavaScript) — web platform where students discover campus clubs, join them and follow upcoming events; tested at Strathmore.
- **Real Estate Management System** (PHP, MySQL, JavaScript) — web platform for property managers to run and monitor their estates.
- **Campus Flea Market App** (Kotlin) — Android app alerting students to upcoming market days, prices and locations.
- **ESP32 Environmental Monitor** (ESP32, DHT22, MQ-5, EasyEDA) — flower-growing sensor rig showing temperature, humidity and gas levels on an OLED; designed the schematic.

EDUCATION

BSc Informatics and Computer Science — Strathmore University, Nairobi — 2022 – 2026 (expected)

Relevant coursework: Distributed Systems, Cloud Computing, Information Systems Security, Database Management, Machine Learning, Data Structures & Algorithms, Embedded Systems & IoT

SKILLS

Languages	JavaScript, PHP, SQL, C++, Kotlin, HTML, CSS
Frameworks & tools	React, Node.js, Express, Tailwind CSS, Docker, Git & GitHub, Vite
Databases	PostgreSQL, MySQL
IT & systems	Network troubleshooting, domain administration, hardware support, system design (UML, OOAD), Agile Scrum
